

CENTROTEC SE – corporate profile

CENTROTEC Sustainable SE, which has its registered office in Brilon, Germany, focuses on the area of energy-saving technologies in buildings. In 2020 CENTROTEC posted revenue of more than EUR 700 million. The CENTROTEC Group is one of Europe's leading players in its field thanks to its innovative energy-saving solutions, and has a presence in over 50 countries worldwide.

CENTROTEC was created in 1998 through modifying conversion of a company that specialised in plastic gas flue systems for modern condensing boilers. From a revenue baseline of EUR 14 million for the predecessor company in 1998, the Group saw its revenue grow to over EUR 700 million in 2020. This expansion was driven partly by organic growth and partly by acquisitions based on a strategy of expansion in the areas of health, comfort and energy. Various well-known brands such as Wolf, Ubbink, Brink, Ned Air and Centrotherm have now been brought together under the umbrella of the CENTROTEC Group, each selling their own products under their separate brand name.

The Group is a fully integrated systems supplier of all key technologies for energy conservation and energy efficiency in buildings. As well as ultra-efficient condensing boiler technology, these primarily include systems that use renewable energies, in particular solar thermal, photovoltaics and heat pumps as well as biogas-powered combined heat and power units. CENTROTEC is furthermore a leading European supplier of ventilation systems with heat recovery, and of gas flue systems for condensing boilers. The CENTROTEC Group possesses key skills and market shares in climate control technology for industrial applications.

In light of limited fossil energy resources and the growing pressure to act on climate change, CENTROTEC is responding to the growing need to conserve energy by creating innovative systems for building services engineering.

Product range

Climate Systems segment

- Heating systems based on oil, gas and heat pumps
- Heating systems based on renewable energies (solar thermal and geothermal)
- Climate control systems with air capacities of up to 100,000 m³ for industrial use
- Ventilation systems (with heat recovery, home air heaters, combined ventilation, heating and cooling systems)
- Combined heat and power units, running on natural gas, biogas and sewage gas

Gas Flue Systems segment

- Metal and plastic gas flue systems for conventional heating systems and condensing boiler technology
- Air piping systems
- Technical roof products, e.g. lead substitute material
- Solar modules for building integration

Medical Technology & Engineering Plastics segment

- OEM and proprietary products for diagnostics and analytics
- High-quality semi-finished plastic products, prefabricated parts, components and assemblies

International presence

Subsidiaries, agencies and sales companies in over 50 countries in Europe, North America and Asia

Revenue in 2020

Over EUR 700 million
